General

The information in this document applies to pension products in which employees are able to invest.

Further information on the investment funds in addition to the information in this document is available at www.asr.nl/service/fondsen-koersen.

The information here includes an information memorandum or prospectus, an annual report for both the funds and the manager, the investment mix, the performance and price movement statements, and the monthly fact sheet. These documents are prepared in order to provide you with further information regarding the nature and risks of an investment in these funds, as well as their value development.

The value of an investment may fluctuate. Past performance is no guarantee of future results. We wish to remind you that the value of investments may either increase or decline.

Investment choices

In the pension scheme, the employer may decide to offer its employees limited or extensive options with respect to their investments.

If the employer decides to offer limited investment options to its employees, the employees may choose between the Defensive, Neutral and Aggressive profiles. Investing according to an investment profile is known as Profile investing.

The Neutral and Aggressive investment profiles allow the employee to choose between two life cycles that are geared towards purchasing one of the following on the retirement date:

- a fixed pension: the amount of pension benefit is guaranteed during the benefit period
- a variable pension: the capital continues to be invested from the retirement date, the amount of pension benefit during the benefit period is therefore not fixed

The Defensive investment profile ensures investments always follow a life cycle geared towards purchasing a fixed pension on the retirement date. If the employee does not make (or has not yet made) a choice, their capital will be invested in the Neutral investment profile as standard. Within a non-WTP scheme, the investments will follow a life cycle geared towards purchasing a fixed pension on the retirement date. Within a WTP scheme, the employer decides the investments will follow a life cycle geared towards purchasing a fixed pension or a variable pension on the retirement date.

Overview of investment options

Employer choices	
Limited	Extensive
Employee choices	
- Defensive life cycle	- Defensive life cycle
- Neutral life cycle, fixed pension and variable pension	- Neutral life cycle, fixed pension and variable pension
- Aggressive life cycle, fixed pension and variable pension	- Aggressive life cycle, fixed pension and variable pension
	- Self-directed investment

If the employer offers its employees extensive investment options, the employee may opt for Self-directed investment instead of Profile investing. With Self-directed investment, the employee can invest in one or more funds of their choice from a range of investment funds.

Profile investment

With Profile investing, investments are made according to the life cycle principle. The employee's investments are automatically adjusted as they approach retirement age. On reaching retirement age, the employee must use the capital to purchase a fixed and/or variable pension

Fixed pension

If the employee opts for a fixed pension on the retirement date, the size of the pension from the retirement date will be fixed. This is taken into account in the life cycle by bringing the investments in line with the fixed pension to be purchased as the retirement age approaches.

If your employee is still far off their retirement date, we choose to invest in mixed funds (a combination of marketable and fixed-income securities). In this period, the focus is on generating a return and we accept more investment risk. As your employee approaches retirement age, we reduce risk by increasing the proportion invested in bonds. By doing this, we ensure that the risks for your employee are limited and they still have a chance to generate an attractive return.

Because with a fixed pension the entire investment capital is used on the retirement date to purchase a pension, the interest rate at that time has a large impact on the amount of the pension. For this reason, we choose shortly before the retirement date to invest in long-term bonds which correspond as closely as possible to the pension to be purchased.

In this way, the investment capital moves in line with the varying interest rates. This limits fluctuations in the pension that your employee will be able to purchase on their retirement date. The employee thus has more certainty regarding the pension that they will ultimately receive.

Variable pension

If your employee opts for a variable pension on the retirement date, the amount of pension will not be fixed. The capital will continue to be invested after the retirement date. A monthly pension benefit will be withdrawn from the available investment capital. The benefit will be re-established annually on the basis of the available investment capital and the prevailing rate at the time. The pension benefit will thus vary from one year to another. This gives your employee the chance to achieve a higher pension than would be the case with a fixed pension. However, their pension may also turn out to be lower. The variable pension life cycle takes into account that investment will continue after the retirement date.

If your employee is still far off their retirement date, we choose to invest in mixed funds (a combination of marketable and fixed-income securities). In this period, the focus is on generating a return and we accept more investment risk. Because the investment capital is not fully used on the retirement date for the purchase of a pension, the investments on the retirement date do not have to be brought fully in line with the pension to be purchased. As a result, your employee will be able to invest more and for a longer period in marketable securities.

Life Cycle funds

The life cycles comprise the following funds:

Fund name	SFDR- classification	Risk indicator (PRIIPS)
ASR Pensioen Mixfonds Defensief	article 8	3
ASR Pensioen Mixfonds Defensief	article 8	3
ASR Pensioen Mixfonds Offensief	article 8	3
ASR Pensioen Bedrijfsobligatiefonds	article 8	2
ASR Pensioen Staatsobligatiefonds 10 -15	article 8	2
ASR Pensioen Staatsobligatiefonds 15+	article 8	3
ASR Pensioen Staatsobligatiefonds 20+	article 8	3

Depending on the investment profile, 100% is invested in the related ASR Pensioen Mixfonds up to 20 years before the retirement age in the case of the Defensive investment profile, 13 years for the Neutral investment profile, and 10 years in case of the Aggressive investment profile. The allocation then changes and investments are increasingly allocated to the ASR Pensioen Bedrijfsobligatiefonds and the ASR Pensioen Staatsobligatiefonds for fixed terms.

ASR Pensioen Mixfondsen

The ASR Pensioen Mixfondsen invest in marketable securities and fixed-income securities.

Marketable securities:	a broad spectrum of equities of listed companies with global spread and/or companies active in a certain region, e.g. the Europe, the United States, the Pacific region and emerging countries:
Fixed-income securities:	bonds issued by companies and governments of good standing within the eurozone, high-yield bonds issued by worldwide companies with a lower credit rating ("high yield bonds") and bonds issued by emerging markets ("emerging markets debt"). In addition, we invest in a cross-section of mortgage loans on private Dutch residential properties, consisting of loans both with and without a National Mortgage Guarantee (Nationale Hypotheek Garantie, or NHG) with implicit ratings of AAA and AA respectively.

Subdivision of strategic investment policy in the mixed funds

	Marketable securities	Fixed-income securities
ASR Pensioen Mixfonds Defensief	70%	30%
ASR Pensioen Mixfonds Neutraal	80%	20%
ASR Pensioen Mixfonds Offensief	90%	10%

The ASR Pensioen Mixfondsen are managed by a specialist team at a.s.r. that takes a critical view with respect to the markets that we follow. An active tactical investment policy is applied for the mixed funds. This means that there is an active response to market developments and, depending on the market view, the bandwidth is utilized to generate extra return. a.s.r.'s sustainability policy is observed. For instance, manufacturers of controversial weapons and manufacturers who allow child labour are excluded.

*The ASR Wereldwijd Impact Aandelen Fonds will be added to the ASR Pensioen Mixfondsen at the beginning of Q2 2024.

The current composition of the mixed funds is available at www.asr.nl/service/fondsen-koersen. The allocation in the ASR Pensioen Mixfondsen is a guideline.

The investment policy allows the fund manager to deviate from the above-stated percentages within set bandwidths. The bandwidths are stated in the Information Memorandum, in the Supplement for the fund in question.

ASR Pensioen Bedrijfsobligatiefonds

The ASR Pensioen Bedrijfsobligatiefonds invests mainly in corporate and other non-government bonds (credits), issued by investment grade debtors. Corporate bonds offer an additional option within fixed-income investments. Due to their higher risk compared to government bonds, investors demand an extra compensation above the government bond yield. This extra compensation for risk is known as the spread. The higher yield on corporate bonds thus offers an additional return. Due to the debtor risk (the risk that the issuer will default), it is essential to diversify the investments across several bonds by means of a fund.

ASR Pensioen Staatsobligatiefondsen

The ASR Pensioen Staatsobligatiefondsen invest mainly in investment grade government bonds issued by governments within the European Monetary Union with terms corresponding to the pension entitlements. There is limited room for investment in semi-government bonds and other loans that are suitable to the investment objective within the stated risk frameworks. The funds are exposed to virtually no currency risk.

Multiple ASR Pensioen Staatsobligatiefondsen are used in a life cycle aimed at securing a fixed pension. The allocation to the ASR Pensioen Staatsobligatiefondsen in a life cycle is such that the average term of the investments corresponds as closely as possible to average term of the pension to be purchased. As a result, your employee is less dependent on interest-rate fluctuations at the time that a pension has to be purchased. This reduces the interest-rate risk for the pension to be purchased. At least annually, the connection between the average term of the investments and the average term of the pension to be purchased is redetermined and the investments are adjusted accordingly. This coordination takes place by adjusting the allocation of the ASR Pensioen Staatsobligatiefondsen.

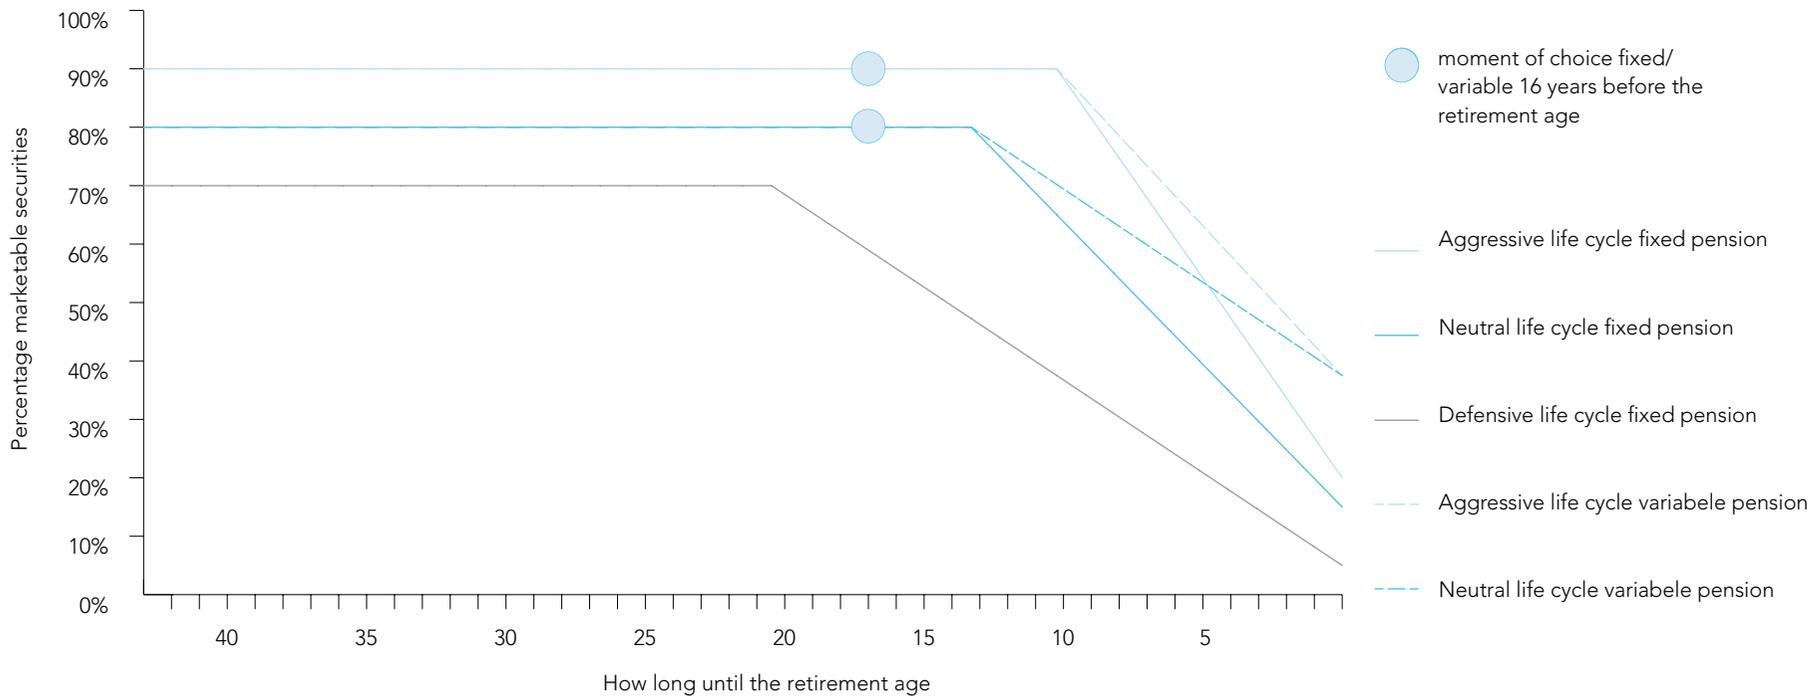

Structure of life cycles

The standard option is to invest according to the Neutral investment profile (the default). Your employees must decide how the life cycle should continue 16 years before they reach the retirement age. Your employees may opt to continue the life cycle with the aim of purchasing a fixed pension, or with the aim of purchasing a fully or partially variable pension.

Depending on the option the employer has chosen, the employees may choose to invest according to a different investment profile:

- Defensive investment profile (for fixed pension life cycle only);
- Aggressive investment profile: in this case the employee must decide how the life cycle should continue 16 years before they reach the retirement age. Your employees may opt to continue the life cycle with the aim of purchasing a fixed pension, or with the aim of purchasing a fully or partially variable pension.

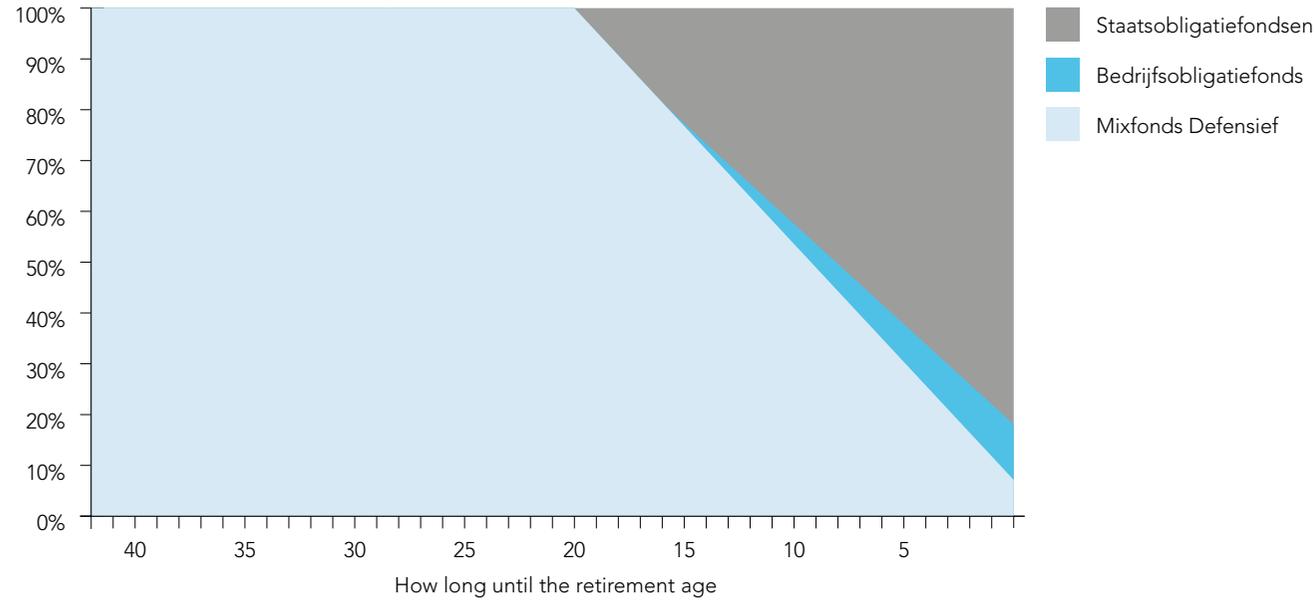

The development of the various life cycles is shown in detail in the tables and figures on the following pages.

Defensive Life Cycle (fixed pension)

	ASR Pensioen Mixfonds Defensief	Marketable securities	Fixed-income securities	ASR Pensioen Bedrijfsobligatie- fonds	ASR Pensioen Staatsobligatie- fonds 10-15	ASR Pensioen Staatsobligatie- fonds 15+	ASR Pensioen Staatsobligatie- fonds 20+

The above table applies with a retirement age of 68 years.

Aggressive life cycle fixed pension, allocation to investment funds

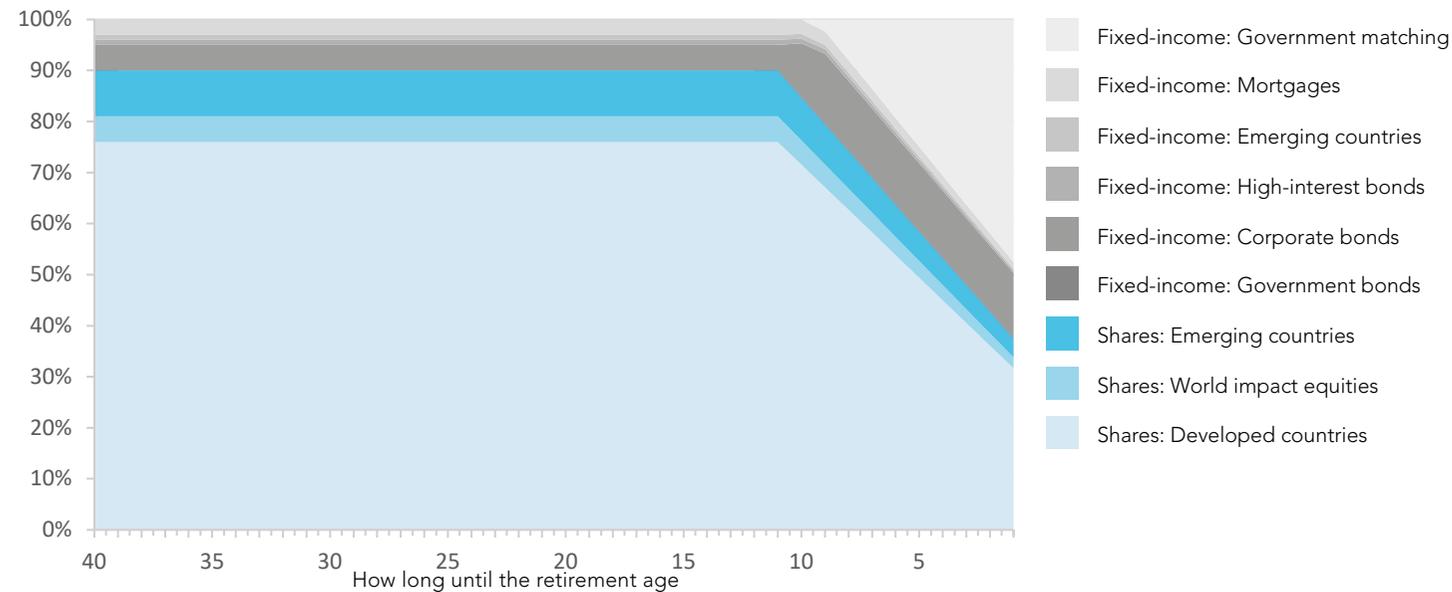

Aggressive life cycle fixed pension; allocation to investment categories

Aggressive life cycle variable pension, allocation to investment funds

Aggressive life cycle variable pension; allocation to investment categories

Self-directed investment

If the employer has chosen the extensive investment option, the employees may choose for Self-directed investment instead of Profile investment.

With Self-directed investment, the employee can invest in one or more funds of their choice from the range of investment funds below.

The range of funds consists of the life cycle funds and an additional selection of actively or passively managed funds.

Fund name	ISIN Code	SFDR-classification	Risk indicator (PRIIPS)	OCF (%)	Entry ¹⁾	Exit ¹⁾

1) These are the maximum entry- and exit fees.

2) The iShares are Exchange Traded Funds (ETFs) and do not apply surcharges or discounts on the net asset value and also do not use swing pricing.

Transaction costs consist mainly of the bid/offer spread (the difference between the bid and the offer price) and the broker commission. Bid/offer spreads are usually narrower for larger ETFs (with more assets under management) and funds with large daily trading volumes. Rebalancing costs are also a factor, since the portfolio has to be adjusted from time to time in line with possible changes to the index.

This means that securities have to be bought or sold, which involves costs.

The charges in the table above may be out of date. The current charges are available at www.asr.nl/service/fondsen-koersen in the monthly factsheet for the fund in question.

Investment fund charges

Ongoing charges

The ongoing charges explain the costs of an investment fund and consist of a management fee, a service fee and other charges (if applicable). The ongoing charges are settled in the price of the fund and are set periodically by the fund manager.

Management fee

The fund manager charges a fee for the management of the fund assets. A fund's investment policy may allow investment in other underlying funds, which will also impose charges.

Service fee

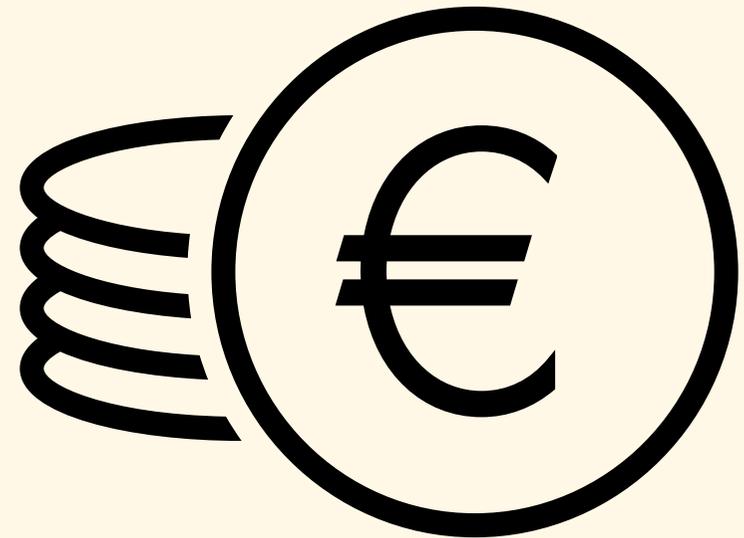

These include the costs of incorporation, supervisory charges, audit fees, custody fees and costs that the investment fund incurs in relation to communication.

Entry and exit fees

Investment funds charge fees for entry and exit, also known as entry and exit loads. These are fees to cover the costs incurred for the transactions when a member enters or exits the fund. In other words, the transaction costs for the purchase or sale of investments.

The ASR Pension Mixed Funds do not charge entry or exit fees, however some of the underlying funds do charge these fees. This means that costs are incurred indirectly. The costs incurred are spread across all the current members in the ASR Pension Mixed Funds. The situation is different for the ASR Pension Bond Funds, which do charge entry and exit fees. These fees are charged through the price and are expressed as a percentage. The percentage varies for each bond fund. The fund manager sets the amount of the entry and exit fees.

Sustainable investing: more than words alone

Our investments should not harm people, society or the environment. That's why all investments must meet strict sustainability requirements. Since 2007 we have used our [Socially Responsible Investment \(SRI\) Policy](#) for this purpose. This policy sets out our criteria on sustainability. And here we describe how we integrate sustainability risks in investment decisions. The policy is adapted from time to time to accommodate new insights, objectives and expectations.

[Countries](#) and [companies](#) that do not meet our criteria are excluded from our investment portfolio. And we actively invest extra in countries and companies that contribute towards a sustainable society. How do we go about this? [Based on positive selection criteria](#) we rank companies and countries that are leading the way on sustainability. By promoting the energy transition and fighting climate change. Or focusing on crucial themes such as healthcare and education.

What specific steps do we take?

We do not invest in arms, tobacco or gambling. Or in companies that generate substantial revenue from nuclear energy, shale oil or coal. We also demand that companies meet international conventions on human rights, labour law and the environment. We apply criteria for the equal treatment of men and women, payment of a living wage, trade union freedom and exclusion of child labour. Regarding investments and government loans, we carefully consider such matters as the degree of democracy and corruption. And we engage in dialogue with the management of companies and governments of countries in which we invest. In this way, we believe we can create more value, both in financial and social terms.

Sustainable Finance Action Plan

The financial sector plays an important role in a greener and more sustainable economy. An action plan has now been drawn up at European level: the [Sustainable Finance Action Plan](#). This plan aims to encourage the financial sector to invest more in activities that focus on the longer term and on sustainability.

One of the European regulations resulting from the action plan is the Sustainable Finance Disclosure Regulation (SFDR). The objective of the SFDR is to improve the disclosure of sustainable investments within the financial sector. We like to provide insight into how we invest and why.

In addition to our [Socially Responsible Investment policy](#), we also provide more insight on sustainability through a Principal Adverse Impacts Statement (PAI Statement).

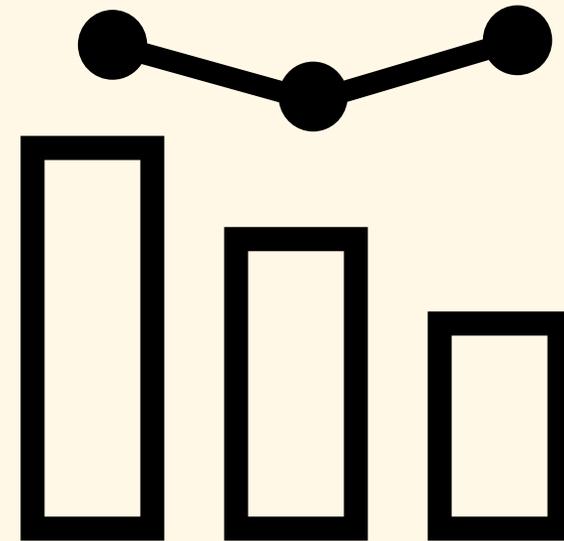

When investing, there is a risk of potentially negative impacts. These are also known as the adverse effects (of investments). How we deal with adverse effects is described in the [PAI Statement](#). In addition, we publish quarterly reports describing the actions we are taking in the area of sustainability. Those reports can be found on the [Sustainable Investor page](#). On this page you can also find our voting policy and our codes of conduct. Read more about [our remuneration policy](#).

Precontractual information

Within the investments of the defined contribution schemes, we also address several sustainability characteristics. We then consider social and environmental characteristics. In the documents below you can read, for example, how we deal with sustainability risks and how these risks are factored into how we make decisions. The composition of the investments evolves with the employee's age, which we also call the 'lifecycle'.

We therefore provide the information for two different age groups:

- [Precontractual sustainability information on the investment portfolio for the 45-year-old age group](#)
- [Precontractual sustainability information on the investment portfolio for the 60-year-old age group](#)

Investment management

The management of the investment funds is outsourced to ASR Vermogensbeheer N.V. (hereinafter: 'AVB'). AVB is a Dutch asset manager that places a high priority on sustainable investment. The clients of AVB include pension funds, insurers, educational institutions, charities and donor-advised funds. AVB works with its clients to achieve a socially responsible return on a daily basis. A return that contributes to the realization of their objectives. For more information, go to www.asrvermogensbeheer.nl. AVB is a wholly-owned subsidiary of ASR Nederland N.V.

AVB was incorporated on 8 June 2007 and has its registered office in Utrecht. AVB is entered in the trade register of the Chamber of Commerce in Utrecht under number 30227237. AVB holds a licence from the Dutch Authority for the Financial Markets (AFM) for the management of investment institutions as referred to in Section 2:65 (1) at (a) of the Dutch Financial Supervision Act (Wet op het financieel toezicht, or 'Wft'). The AFM has also licensed AVB to provide the following activities or services on the basis of Section 2:67a (2) at (a), (b) and (d) Wft:

- management of an individual capital;
- to provide advice with regard to financial instruments in the pursuit of a profession or business;
- to receive and transmit client orders with regard to financial instruments in the pursuit of a profession or business;

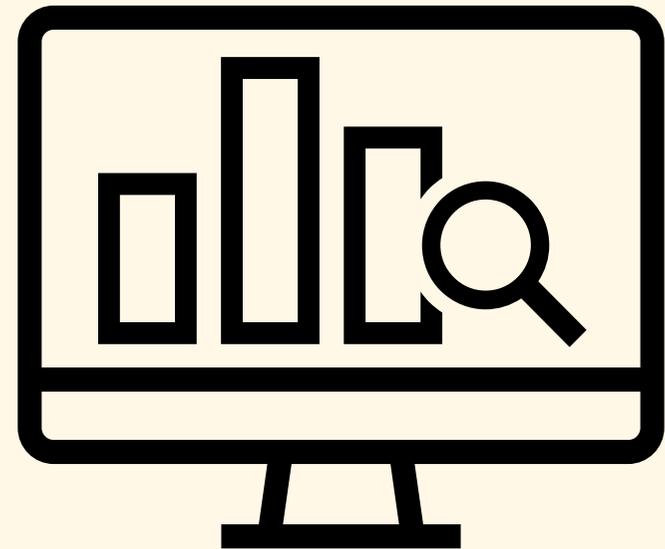

29 Pension Profile investment and Self-directed investment

A number of the funds (including the underlying funds) in Profile investment and Self-directed investment are managed by professional external asset managers. AVB has a monitoring function with respect to these funds.

Both AVB and these professional external asset managers have ISAE (International Standards for Assurance Engagements) 3402 type II accreditation. This demonstrates that the asset managers have a thorough command of the processes and quality aspects.

a.s.r. Pensioenen continually strives for an optimal composition of the investment profiles and the funds in Profile and Self-directed investment.

a.s.r. Pensioenen is accordingly able to adjust the investment profiles and/or remove or replace the funds (including the underlying funds) in Profile investment and Self-directed investment from the range, for example if the pricing and/or performance of these investment profiles and funds and/or the external asset managers give reason to do so.
